

Walden's Puddle Newsletter

2022

Happy Blessed Holidays

RED FOX

This year alone we have admitted 32 Red Foxes and two Gray Foxes all with mange. Mange is now a major issue due to humans using rodenticides (poison) and habitat loss due to our city's growth. Mange caused by a mite infestation can usually be fought off by a healthy animal. Poisoned rodents make easy prey and drastically weaken the fox immune system.

Dearest Puddle Friends,

We pray this Newsletter Appeal finds you well.

We are so grateful to have another year to greet you and catch you up on our work! Every day we feel your deep compassion and generosity. It is what allows us to continue to serve you and our community's wild ones in times of need. Your Walden's Puddle team is an amazing, caring group of individuals who all work together to fulfill our mission of "Giving Wildlife a Second Chance". It has been a year of much hard work, progress and renovation on many levels. You can feel good knowing together we have saved thousands and because of you, we are standing strong and in readiness for the injured and orphaned who will need us in the days to come! As 2022 comes to a close, please remember that you are always in our hearts. We pray you wellness, happiness, peace and a new year full of dreams fulfilled!

God bless you and all glory to God!

Much Love, Lane Brody ("In kind" CEO), WP Working Board Staff & all the Critters

GREAT HORNED OWL

Would you like to help us feed our raptors, like this Great Horned Owl? We provide animals in our care with the exact nutrition they need. For raptors, this is rodents which are not cheap.

VIRGINIA OPOSSUM

Fun fact - they are essentially immune to rabies due to low body temperature.

Walden's Puddle is able to provide full veterinary services thanks to WesVet Animal Hospital allowing us to use their facility! Our veterinarian and veterinary technician work with our animal care technicians to ensure the best possible care for each and every patient. We're so grateful to have such a strong team.

*Help us live!
Please,
give all you
can.*

Juvenile Red-tailed Hawks go through an awkward stage of learning how to bird. If panicked they lay on their back with their talons in the air as a stress display. Look at the tail to tell the difference between a juvenile with brown or grey stripes and an adult typically solid red.

Vultures tend to have a bad reputation, but the more you learn the more you love them! Fun fact: they are highly social bonding for a lifetime with their family. They are monogamous, staying with their mate for years.

Stay Warm

& Cozy

We are here to help 615-559-WILD (9453). We can guide you on the best way to go about reuniting babies with parents and that is best for all!
